        x.value = x.value.toUpperCase();

    }

</script>

</body>

</html>
```

Practical No. 8

Que 2. Write a program for onselect function.

Code :

```
<html>

<head>

<title>onselect</title>

</head>

<body>

    <form name="changing">

        Enter Name :<input type="text" name="name" id="demo" onselect="change()">

    </form>

    <script>

        function change()

        {

            document.write("You selected text");

        }

    </script>

</body>

</html>
```

Practical No. 8

Que 3. Write a program for onsubmit function.

Code :

```
<html>

<head>

<title>onsubmit</title>

</head>

<body>

    <form onsubmit="change()" action="https://google.com"> Enter
    Name :<input type="text" name="name" id="demo"><br>
    <input type="submit" value="submit"> </form>

<script>

    function change()
    {

        var x = document.forms[0].name.value;

        alert("you entered this text : "+x);

    }

</script>

</body>

</html>
```

Output :

Practical No. 8

Que 4. Write a program for onreset function.

Code:

```
<html>

<head>

<title>onreset</title>

</head>

<body>

    <form onreset="change()">

        Enter Name :<input type="text" name="name" id="demo"><br>
        <input type="reset" value="reset"> </form>

    <script>

        function change()

        {

            var x = document.forms[0].name.value;
            alert("you entered this text : "+x);

        }

    </script>

</body>

</html>
```

Output :

Practical No. 8

Que 5. Write a program for onkeyup function.

Code :

```
<html>

<head>

<title>On KeyUP</title>

</head>

<body>

Enter Name : <input type="text" name="changes" onkeyup="change()" id="demo">
<script>

    function change()

    {

        var x = document.getElementById("demo");
x.value = x.value.toUpperCase();

    }

</script>

</body>

</html>
```

Output :
